

INTERNAL FACILITIES: 03

HOW THIS PROPOSAL IMPROVES THE FACILITY:

- Current small floor area limits the activity undertaken upstairs to approx. 15 people. For a club of 240 members this severely impacts our use of the building.
- The existing small space only allows one activity to be undertaken at a time, so we are restricted in what we can do. We only use either the kitchen facilities or the gym equipment.
- Heating is necessary to provide a warm and welcoming environment, to retain new paddlers through the winter months as well as allowing an indoor winter training programme.
- An enlarged floor space will enable gym training, meetings and lectures, presentations or post training debriefs to take place simultaneously.

IMPACT:

- With improved facilities we expect existing paddlers to participate more regularly in winter training.
- We will be able to offer weekly regular gymnasium sessions for recreational paddlers and competition athletes and as well as having circuit training and indoor Kayak competitions.
- We will attract more new participants with the UCanoe Wined project held indoors and a dry winter training programme in a warm, welcoming environment.
